## Brown County’s Champion Tree Committee/Measurers

Timothy Bauknecht – Ashwaubenon Village Forester, 2155 Holmgren Way, Green Bay, WI 54304

Christopher Clark – Village of Howard Forester, P.O. Box 12207, Green Bay, WI 54307

Jim Fameree – N.E.W. Master Gardener Volunteer/Ashwaubenon Tree Board, 1294 Alice Dr.,  
Green Bay, WI 54304

Mark Freberg – Green Bay City Forester, 100 N. Jefferson St., Green Bay, WI 54301

Lynn Green – Village of Allouez Forestry Department, 1900 Libal, Green Bay, WI 54301

Paul Hartman – Retired Brown County UW-Extension Horticulture Agent, 320 S. Jackson St.,  
Green Bay, WI 54301

Tim Lang – Retired Green Bay City Forester, 170 S. Fisk St., #22, Green Bay, WI 54303

Brad Lange – Village of Allouez Forester, 1900 Libal St., Green Bay, WI 54301

Don Melichar – De Pere City Forester, 335 S. Broadway, De Pere, WI 54115

Eric Muecke – Assistant Green Bay City Forester, 100 N. Jefferson St., Green Bay, WI 54301

Harvey Plansky – N.E.W. Master Gardener Volunteer, 246 Berger, #320, Green Bay, WI 54302

Jim Tubbs – N.E.W. Master Gardener Volunteer/Ashwaubenon Tree Board, 984 Watermolen Ave.,  
Green Bay, WI 54304

Jerry Watzka – Village of Allouez Forestry Department, 1900 Libal, Green Bay, WI 54301

Rodney Webster – Village of Allouez Forestry Department, 1900 Libal, Green Bay, WI 54301

This document was funded in part by an Urban Forestry Grant from the State of Wisconsin Department of Natural Resources Forestry Program as authorized under Wis. Stat. 23.097.

Front cover picture: Members of the Brown County Champion Tree Committee in front of a Quercus bicolor (Swamp White Oak) at 1631 Fiesta Lane, Green Bay, WI.

## Wisconsin Champion Tree Additional Information

### Circumference Measurement:

Using a flexible tape measure, measure the distance around the trunk of the tree to the nearest inch at 4 ½ feet above ground level. If the tree forks, record the smallest circumference between 4 ½ feet and the ground below the lowest fork excluding dead branches and epicormic sprouts.

### Height Measurement:

Take a 12-inch ruler and hold it vertically at eye level, in an outstretched arm. Stand far enough away from the tree so that you can roughly see both the base and the top of the tree between the top and bottom of the ruler. Move forward or backward until the eye sights the base of the tree (A) across the 0-inch gradation (a) and the tip of the crown (B) across the 10-inch gradation (b). Then a sight is taken across the one inch (c) gradation and the corresponding point (C) is marked on the tree by a companion. Using a tape measure, measure the distance from the base of the tree to this point (AC) to the nearest foot and multiply by ten. This is the height of the tree (AB). If a height measuring instrument (clinometer, hypsometer, etc) is available, its use is preferred. Be sure to report your method of measurement and have someone else verify your results.

### Crown Spread Measurement:

Two measurements of the crown spread are taken and recorded (in feet), at right angles to one another. The first is the widest crown spread, which is the greatest distance between any two points along the dripline of the tree. (The dripline is the outline on the ground of the outermost leaves of the crown.) Once the widest spread has been found, turn the axis of measurement 90 degrees and find the crown spread. The two crown spreads are added and divided by two to determine the average.

### Point Value:

The total point value is calculated as follows:

Total Points = Circumference in inches + Height in feet + 1/4 of Average Crown Spread in feet

### Legal Description:

A legal description is used to describe the location of your land in legal documents (for example, the deed to your land). The Public Land Survey System (PLSS) is used in legal descriptions. It employs a grid system based on township, range and section numbers.

Here's an example of a PLSS legal description: N 1/2 SE 1/4, SW 1/4, S24, T32N, R18E

If the legal description is not known, please leave blank.

### Latitude and Longitude:

Latitude and longitude are used to describe locations relative to the equator and prime meridian respectively. Latitude and longitude measurements are obtained from a GPS unit in decimal degrees (<sup>o</sup>N 43.07495<sup>o</sup>, W 89.38000<sup>o</sup>). If a GPS is not available, please leave blank and the latitude/longitude coordinates will be taken by a champion tree inspector.

### General Appearance/Health of Tree:

A general description of how healthy the tree appears. Condition descriptions are used to help estimate the life expectancy of a given tree and project the necessary frequency of remeasurement. Condition class examples are as follows:

**Excellent:** Sound and solid trunk, good general growth form, no pests present, full and balanced crown

**Good:** Sound and solid trunk, good growth form with some minor limbs dead, no pests present, full but unbalanced crown

**Fair:** Sections of bark missing on trunk, one major or several minor limbs dead, one pest present, full but unbalanced crown

**Poor:** Extensive decay and hollow trunk, two or more major limbs dead, two or more pests present, unbalanced/not full crown

**Dead/Dying:** Tree is dead and/or removed, in significant decline and will likely not live through the year

**Not Sure:** Unsure of what condition the tree is in and/or would prefer a champion tree inspector classify the condition class

### Trunk up to 5 feet:

Description of the trunk branching characteristics up to 5 feet from the average ground level. Descriptions are as follows:

**Single Stem:** Tree has a single trunk stem

**Multiple Stem:** Tree has multiple trunk stems (>2 stems)

**Twin Stem:** Tree has two stems, or a split stem

**Not Sure:** Unsure of the trunk characteristics and/or would prefer a champion tree inspector to classify the tree

## **How to Nominate a Champion Tree**

Fill in the Wisconsin's Champion Tree Nomination Form at the end of this book, or record the following information:

### Species

Identify the species of the tree, listing both the common and scientific name. Include genus, species, variety or cultivar designation. Refer to a good tree identification book and, if necessary, take a twig and leaf specimen to an authority for positive identification.

### Tree Measurements

Record the size of the tree by measuring the circumference in inches, the height in feet, and the average spread in feet. Note the height at which the circumference was measured if different than 4½ feet. Measurements must be verified by a member of the Brown County Champion Tree Committee.

### Location of the Tree

Include name of municipality, village or township where the tree is located.

In a rural area include GPS coordinates, if available, or the quarter, section, township, and range (also include relationship to highways, farmsteads, woodlots or other geographic features).

In an urban area report the street address and indicate the location of the tree on the property such as backyard or street tree.

### Other Required Information

Include the name, address, phone number and email address of the owner, nominator and measurer.

Note the date the tree was measured.

Include comments on the tree's condition, age, history, and other relevant information.

## **Submitting a Nomination or Updated Measurement**

Submit your nomination or updated measurement to one of the Brown County Champion Tree Committee members listed on page 1. All measurements and updates must be verified by a committee member.
